Mr. Rawlings,

We spoke on 10-4-17 about your locate needs on the Hicks farms on Fred Wilder Rd where you will have contractors harvesting timber. Franklin County Public Utilities has a raw water suction line crossing this farm and we agreed to have this located by end of the day 10-10-17. During our conversation you asked what our needs would be to protect this water line from the heavy equipment that it could be exposed to during the harvesting. I ask that our marked right of ways not be used as a path for the equipment or trucks used. In the event this can't be avoided I ask you use bridge or road matting in these areas to distribute the weight over the water line. In the event a crossing must be made, by the equipment or trucks, use bridge or road matting in these areas as well. The marks/stakes we use will be center of the water line, we need 10 feet on each side of these marks to be protected as well. This is needed so not to disturb or damage the main in the crossing and road areas that may be used. I ask that you notify me when this work will begin, as we will inspect our right of way periodically throughout the harvesting process. We talked about a valve that is at the creek crossing and the main being shallow in that area. When trees are fell near the valve I ask that care be given and not drop these trees on the valve. We have the valve marked with a blue marker near the waterline at the creek. If you need to meet out at the site to talk about any of the above describe please do not hesitate to call me to set up a time and date to meet. Give our contact information, provided below, to the contractor as well and have them call me immediately if they notice any damage or a leak.
